

# Himanshu Saini

Cracked Engineer

+919896039378 • hs913271@gmail.com • himanshu-saini.com • github.com/Misterr-H • leetcode.com/u/hs913271

## EDUCATION

### B.Tech, Computer Engineering

Graduated July 2024

J.C. Bose University of Science and Technology

7.96 CGPA

Faridabad, Haryana

Relevant coursework: Data Structures & Algorithms, Operating System, Design and analysis of algorithms, Computer Networks, Computer Organisation & Architecture

## TECHNICAL SKILLS

**Data Structures and Algorithms:** Top 23% on LeetCode (Arrays, DP, Graphs, Trees, Bit Manipulation)

**Programming Languages:** Python, JavaScript, C/C++, SQL, Java, Dart, TypeScript, Rust, Golang, Solidity

**Web Technologies:** React.js, Node.js, Next.js, Vue.js, Express.js

**Mobile App Development:** React Native, Flutter, Swift, Android Kotlin

**AI:** LLMs, RAG, MCP Layering, Computer Vision

## PROFESSIONAL EXPERIENCE

### Hobit Technologies, Faridabad, Haryana: Founding Member & Tech Lead

Feb 2023 – Present

- **Early-Stage Founding Role:** Collaborated directly with co-founders to shape the product vision and technical roadmap, influencing key decisions on tech stack selection, feature prioritization, and team growth strategy.
- **End-to-End Mobile Development:** Spearheaded the creation of a high-performance mobile application using **React Native**, leading a cross-functional team of 4 (backend and frontend) to deliver on schedule.
- **Innovative Diet Tracker Feature:** Integrated **Gemini LLM** to extract nutritional information from food images, resulting in a 30% surge in user engagement and providing tangible benefits to fitness-focused users.
- **Advanced AI Integration:** Leveraged deep React Native internals (**JSI** and bridgeless architecture) to incorporate the **Blazepose AI Model** for real-time pose detection and calorie tracking, increasing user participation in fitness classes.
- **CRM System Development:** Led a team to build an internal CRM connecting Dietitian, Customer Support, Admin, and Sales teams; adopted Firestore's real-time capabilities to eliminate polling, boosting sales by 30% and expediting customer query resolution.
- **Leadership and Mentorship:** Oversaw daily stand-ups, code reviews, and sprint planning; mentored interns to enhance their technical skills and guided design teams to maintain UI/UX consistency across mobile and CRM platforms.
- **Project & Team Management:** Introduced Agile methodologies (Scrum) to ensure on-time deliverables and cohesive collaboration, resulting in a more efficient development cycle and higher team satisfaction.
- Developed **efficient cycle prediction algorithms** for female periods tracking, leveraging **sorting, memoization, and graph traversal**, improving query efficiency by 30%.
- Created algorithms for **real-time energy and body heat tracking** in fitness classes, demonstrating advanced data structures usage and performance optimization.
- Optimized **female menstrual cyclic data processing** using prefix sums and modular arithmetic, reducing redundant computations by 40%.

### Unlock Velocity, Faridabad, Haryana: SDE Intern

Feb 2022 – Oct 2022

- Delivered Admin Panel project built with Reactjs
- Developed 30-40 REST APIs with ExpressJS and PostgreSQL, implemented in a Flutter mobile application.

## PROJECTS

### Litechain - Zero-Boilerplate LLM Framework for Humans - Source Code

Built a lightweight langchain alternative to build Ai Agents at speed of light.

- 800 weekly downloads on NPM
- Supports gemini, groq, claude and Openai

- In built automatic tool call support, in built memory management to save tokens, in built budget tracking

### **TrackYourDev - Fully automated Jira with zero context switches - Source Code**

Built a tool pure out of frustration of Jira, Asana to automate the task board instead of manually updating it using ai.

- Used Groq to run directly on commits to analyse code diffs to generate tasks
- Sign up with github (takes 10s) and immediately see who did what
- Appreciated by many techies on twitter

### **NPM Package, React Native: react-native-human-pose**

- Contributed open-source solution for integrating Human Pose Estimation into React Native apps.
- **Blog Post: Human Pose Detection in React Native** 

### **NPM Package, Goofyy: Play music straight in terminal**

- No need to switch to spotify or youtube, play music straight in terminal with npx goofyy "shape of you"
- **Blog Post: Play music right in your terminal while coding with Goofyy** 

## **ACHIEVEMENTS**

---

- **1st Position** in Hacked Hackathon organized by BML Munjal University among 50+ teams
- **1st Position** in Capture The Flag competition at Tech Aramabh Hackathon by GeeksForGeeks.
- **2nd Position** in Responsive Vantage Web Development Hackathon by GGSIPU.
- **3rd Position** in The Chosen One CTF competition at InfoXpression 2022-23 by USICT, GGSIPU.
- **3rd Position** in Chunnauti - Solutions for SIH22, a University Level Hackathon.
- Nominated for **Innovation Award** for Digital ID Card concept by DSW, JC Bose University.
- Completed all 4 levels of Hacktoberfest 2022 with **6 open source contributions**
